## HOW TO SELECT THE CORRECT CABINET SIZE?

### SINK CABINET SIZING

Measure your cabinet's outside width (side to side). Make sure you select a sink with a minimum recommended cabinet size no larger than this measurement.

Measure your countertop from back to front. If you have a post formed backsplash, do not forget to subtract this from your measurement. Remember that if you have an Undermount sink, or a sink without a lip for faucets, you will need to allow space for faucets in choosing your sink.

### INSTALLATION PROFILES FOR UNDERMOUNT SINKS

There are three methods of installing your Undermount sink, which will reveal varying amounts of the top profile of the sink. Acri-tec sinks can be installed with either an overhanging profile, a flush profile, or a set-back profile.

Ask your countertop fabricator to adjust the cut-out opening to suit whichever installation you require.

Remember in choosing your Undermount sink to consider the depth of the countertop. If the countertop has a thickness of 1", after final installation your Undermount sink will have an extra 1" added to its total depth.
